INTRODUCTION

Clinic and Cabins for Sta. Elena Golf club

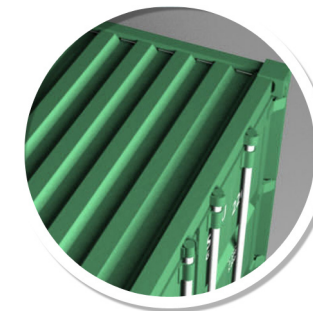

SMART Mobile Internet Cafe

A Three storey home made with Recycled Containers

A Multi-level commercial Complex in Gapan Nueva Ecija

We strive to become the market leader, as we hone our technology in recycling Dry cargo vans in the most economical way--continuing to think outside the box' in our designs and finding new ways to utilize it.

We have total appreciation for the van's versatility.

TECHNOLOGY

Durable

The container van may be compact but it is deceptively strong. The Van's corten steel structure is designed to carry up to twelve times its weight, in cargo. It has self oxidizing properties that delays corosion and extends the life of the van for up to 25 years. The corner posts of the van allows it to be stacked up to 11 high, which makes it a truly safe and effective material for building.

Mobile

The van's size makes it an ideal solution as temporary off-site structures. It is also a practical alternative if you need shelter in hard to reach provincial areas.

Bottom: Pre-fabrication of a multi-level building

Customizable

Do you need extra storage space? A functional and state of the art office facility? A mobile food stall? We can convert the van to serve whatever purpose you like. It can be modified to suit your needs in a matter of days.*

Affordable

We provide you an affordable alternative since our basic material is recycled container vans. We refurbish and restore the original structure so that it requires minimal reinforcement on the walls and ceiling. We prefabricate and convert the vans in your yard, so it is easy to install and readily available for use.
